An informed choice is critical. Try to select a topic that enables you to examine a significant issue, carries your readers to another level of understanding about the subject, and has a specific purpose (one that demands analysis of the issues, argues from a position, and explains complex details).

When looking for a topic . . .

- Consider your own interests and experiences
- Discuss ideas with peers/coworkers/family/instructors; get feedback
- Cross-reference searches between library and internet resources
- Pay attention to current events via newspapers, magazines, radio, and TV
- Ask yourself questions about the topic; find answers in preliminary research
- Consider the parameters of the assignment (length of paper, purpose, etc.)
- Leave your options open– don’t rule anything out until you do some research
- Make a list of topic ideas— don’t give up after you’ve discovered one good idea
- Always have a backup plan (“plan B”) in case one topic doesn’t work out
- Keep an open mind about new ideas and perspectives

Your research paper will only be as good as the topic you choose, so choose wisely!
